DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention: The embodiment of Figs. 1-10B,

The embodiment of Figs. 11-16,

The embodiment of Figs. 17-20,

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 4 and 6 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

Art Unit: 3721

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

During a telephone conversation with Mr. Russell Walker on 7/19/2004 a provisional election was made without traverse to prosecute the invention of Figures 11-16, claims 1-7. Affirmation of this election must be made by applicant in replying to this Office action. Figures 1-10B and 17-20 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected embodiments.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Zylka et al. (US 5,184,752).

Zylka et al. discloses a fastener gun (10) having a magazine (50) holding a plurality of stacked caps (310) including pusher means (712); a cap feeding apparatus (12, 50) in combination with the fastener gun comprising: a cap feeding body (50) with a chamber (hollow portion of magazine) having a first end (upper portion of magazine) and second end (lower end of magazine); retaining means (82) in opposition to the pusher; a shuttle (52) mounted for reciprocation within the chamber between the a cap-receiving position to cap ejecting position.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Zylka et al.

Zylka et al. substantially show the claimed subject matter as discussed above including retaining means (82). Zylka et al. do not show the use of a spring arm in the retaining means. Examiner takes Official Notice that it is well known in the art to use spring arm as claimed and it would have been obvious to provide Zylka et al. with spring arm means to provide for a biasing effect.

Allowable Subject Matter

Claims 4-7 are allowed.

Claim 3 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

Refer to attachment for notice of references cited and recommended for consideration based on their disclosure of limitations of the claimed invention.
